In bacteriology, gram-positive bacteria are bacteria that give a positive result in the Gram stain test, which is traditionally used to quickly classify bacteria into two broad categories according to their type of cell wall.. Gram-positive bacteria take up the crystal violet stain used in the test, and then appear to be purple-coloured when seen through an optical microscope.

ARTICLE: For several months, experts have highlighted the true cause behind the COVID-19 pandemic, namely the incorrect use of PCR tests set at a ridiculously high cycle count (CT), which falsely labels healthy people as "COVID-19 cases." In reality, the PCR test is not a proper diagnostic test, although it has been promoted as such.
