A computer virus is a type of computer program that, when executed, replicates itself by modifying other computer programs and inserting its own code. If this replication succeeds, the affected areas are then said to be "infected" with a computer virus. Computer viruses generally require a host program. The

virus writes its own code into the host program.

The Intel 8085 ("eighty-eighty-five") is an 8-bit microprocessor produced by Intel and introduced in March 1976. It is a software-binary compatible with the more-famous Intel 8080 with only two minor instructions added to support its added interrupt and serial input/output features. However, it requires less support circuitry, allowing simpler and less expensive microcomputer systems to be built.

A brief sketch of the beginnings of Virginia seems a necessary introduction to a history of Orange. For though this history will be mainly confined to the present narrow limits of the County, it ought to be known to those who may read it that Orange was once a principality in extent, embracing in her limits five prosperous states of the Union, and parts of two others.
