The formula defines the energy  $E$  of a particle in its rest frame as the product of mass  $m$  with the speed of light squared ( $c^2$ ). Because the speed of light is a large number in everyday units (approximately  $3 \times 10^8$  meters per second), the

velocity (in radians/sec)  
about a particular axis.

However, if the  
particle's trajectory lies  
in a single plane, it is  
sufficient to discard the  
vector nature of angular  
momentum, and treat it  
as a scalar (more  
precisely, a  
pseudoscalar).
